

ABSTRACT

A container having a container body, a base, a flange circumferentially extending partially about the container body to define a gap exposing a portion of the container body, and an optional lid. The lid may attach to the container body to form an air-tight seal. The gap advantageously allows a tool or a digit to be used to access and remove the lid from the container body. It is emphasized that this abstract is provided to comply with the rules requiring an abstract that will allow a searcher or other reader to quickly ascertain the subject matter of the technical disclosure. It is submitted with the understanding that it will not be used to interpret or limit the scope or meaning of the claims. 37 C.F.R. § 1.72(b).
